What is the best wall color for a projector? The white canvass is mostly used in the theaters and I haven't seen a movie projected on a dark colored wall. Is white always the best color for projection?

The guy at Best Buy told us to inspect the wall for any dents or rough patches and to spackle those first to smooth them out. Then paint over it with a white primer and allow to dry. Then paint over that with a shade of gray paint depending on the amount of lumens your projector produces.

I've seen some fancy DIY kits on Amazon for about \$200 that comes with everything you need. The one I used is no longer available, but there are similar kits on the same page.
