I have a Dual cs514 that is having motor problems. Sometimes works fine, Sometimes doesn't work at all and sometimes runs too slow. When it doesn't work at all the small wheel at the motor where the belt goes round doesn't turn at all so it doesn't appear to be belt slippage. I do get that click when the arm moves over to start. Any thoughts?

Sounds like the motor is just about shot. If you aren't comfortable repairing it yourself, might be time to take it in for service.
