I just bought a Denon DP-32F at ebay. It works fine. The problem is, though, that the sounds I get is too bass heavy, as it were. If I play certain records (club music, everything that is produced with multiple layers of bass) my speakers begin rebelling and it has nothing to do with volume. The problem doesn't occur with digitalised tracks.Does anyone have an idea what to do?Thank you

The tracking force is too heavy. You need to back off on the adjustment some.

That doesn't do the job unfortunately. Any other suggestions?

It seems to be a problem of the cartridge/stylus. What kind of cartridge/stylus would be a good choice for also playing well produced club music?

Stanton 500ls; should be able to get it for about 55$. Then glue the stylus to the body with a tiny dab of crazy glue.
