Today's movies and some TV shows have 4K resolution. Will this type of quality become the norm that buying a 4K TV now would be a good investment for the future? Or will 4K TV become cheaper in the future?

If you have the money for 4K TV, then go for it. I'm sure the price of this type of TV will become cheaper as the years go by, and as this TV becomes the norm. I would wait if I were in your shoes.

The TVs will definitely become cheaper with time but we all know that the technology around this space changes rapidly so keeping up with the changes can be tasking. I would only buy a 4K TV if the one I have now suddenly malfunctioned.

Is it a must? Only if you have your reasoning swayed by the what's new is best fantasy. I could care less this need to upgrade to every advantage they swoon at us. I use an older LCD tv that I've nursed along to keep working. Read the smart tv ads posting. T'aint worth it for me.

What I noticed with gadgets and electronic equipment in our time is that they easily get broken. I remember tapping the TV of my grandfather if it is not working and the tap will fix the problem.

As for 4K TV, I will be satisfied with a cheaper LED TV without the 4K option.

I don't really think that a 4K TV is a must, unless a person can afford and is in real need of it. It is true that TV upgrades tend to 'happen' so fast when it actual sense, there's normally not much change in terms of resolution.

I wouldn't mind getting a 3D TV set, when that time comes.

I think that's been toy'd with some. I saw a display a couple years back of a 3D set. To me, the effect was unimpressive. Looked like layers of 2D images impressed upon one another. Kind of silly actually. They didn't last long, plus just the availability of material made to whatever standard it was. It's got a way to go yet unless some new development's come down the pike.

4K isn't really worth it right now. The resolution will still be displayed in 1080p unless you spend lots of extra money. In a couple of years, the price will go down. I don't care about 4K, 1080p still looks really great to me. How much more "realistic" do we need the television set to look anyway?
