Hi I have a pair of fully loaded Pi4 that I am considering selling. I love these speakers but its been 6 yrs and want to try something new. These have new wave guide, premium caps and resistors and Alpha foil inductors and custom litz wire harness by Alex at Wywires. I have in excess of \$3k into these and considering local sale as these are very heavy, made from 1" MDF. JBL 2226, DE250 premium XO parts and walnut veneer. \$1500 consider offers. thanks Austin Tx

No Texas audiophiles looking to build some Pi4's? I realize local sale is risky, I would be willing to drive a certain distance if that helps. Open to shipping but would be expensive.
Would be willing to entertain \$1200. :)

The capacitors used in XO are Auricaps and Jansen Superior Z as well as 12ga Alpha copper foils as inductors.
