Time to sell my 4pi speakers and pair of 3 pi subwoofers built to spec. Asking $995 for everything. These have provided me great listening pleasure for 7+ years. Downsizing and no longer have the room. The drivers are JBL 2226Hs and B&C DE250s. They were purchased brand new from parts-express. Same with the 3 pi subwoofers, new when building from PE. The 4pi cabs were professionally built to Wayne's specs. Finished to the best of my ability. But easy for someone with better skills to refinish to their preference. I built the 3 pi subs to specs. These are sealed tight with accurate port dimensions and overall dimensions. But unfinished.

Perfect functionally. The 2226H have dust caps depressed but do not affect performance. Cannot ship. Local pick up from SE Michigan. I can assist within reasonable distances in metro Detroit / Toledo area.

I hate it when those dust caps get poked in! David Miller at Speakerworks in Tulsa will repair those good as new very inexpensively. They don't need a full recone - They just need the cap - so most recone shops can do it pretty cheap. Costs less than lunch.

You or anyone interested in buying might also look into shipping services to palletize the speakers and ship them via LTL carrier.

Thanks Wayne. I have listened to them like that for some years now. The dented dust caps do not affect seem to have any effect on sound quality.
