Wayne,

Can you comment on the gains from using the JBL2012H in the 7pi mid horn? In what way does it sound different from the Delta 10?

Thank Jeremy

A bit smoother and more delicate.

I found a pair so I think I'm going to give them a try. Are there any crossover adjustments needed?

Hi Wayne, how low does the mid horn in the 7 PI go?

200Hz is where it'll start rolling off, but I run it below that in the cornerhorns so it blends with the woofer. When using a driver like the Alpha 10, you can even reflex-load it to get much lower, like I do in the eight Pi loudspeaker.
