Can anyone conclusively answer this question yet? If a tree falls in the forest with no one, or thing, around to hear it, does it make a sound?

I know all about the mass on mass logic, but can we put to rest, conclusively, the argument that states since no one is there we will never know for sure?

The side of "no one being there" only exists because people think that we are the final point of reference as to why ANYthing exists. It's an ego thing, and it's flawed logic.

Absolutely. Asteroid chaser and gravel grabber Osiris-Rex mission is to give insight to our local universe make up way long before we started traipsing around on this ball. Trees fall, continents shift. A far more interesting observation is that from what seems to be nothing but inert matter, evolves into self conscious entities questioning our origins.
