Hi...I just found a Collaro High Fidelity RC456 turntable in my grandparents' basement. I think it was made in the late '50s or early '60s. It plays 33s and 45s, but the problem is that it will play the record for about 10 seconds and then stop turning. And it only plays at about half the normal speed. Does anyone know anything about these?

Probably better take that one in to the shop. I hope they can still get parts for it.
