I somehow stumbled across a pic from BigMouthinDC in AVS from like 2012.

I am interested to learn about these kits, the 3Pi and 4Pi. I had owned some DIYSG 1099s but I have sold them.

Can anyone chime in on the 3Pi and 4Pi. I can't find much info as to the differences and are the kits still available.

How are these different than the DIYSG HTM12's?

I am currently moving into a new house that will have a dedicated theater room. The room is very modest at 12' wide by about 25' deep. It is built over a garage. I am thinking about 3 speaker for behind a screen... however I am open to ideas.

I think I will have a more dedicated 2CH system in my office.

Thanks
Chris

Check out the Pi Speakers FAQ. It has information about the differences between models, various technologies used, basic setup information and a whole lot of other stuff.

That should get you started, then ask any other questions you might have here.
