It seems like the pandemic situation isn't going to get better anytime soon. At least, precautions are still being applied, so online classes and video conferences will remain the primary way of conducting activities. I'm at a crossroads here choosing among earphones, earbuds, and a decent headset. What do you think is the most practical thing to buy?

Have you thought about wireless earbuds? If mobility is important to you, I don't think you can do better than that. They can be a bit pricey, but I think that's the best way to go these days.

It depends on the work you have, if it's only for video conferences wireless earbuds should be better than earphones. Headset, I think, is only ideal to have when your work concerns online tutoring because it could be uncomfortable when used for a long duration.

Another consideration is ambient noise. Is there a lot? Do you need to hear what nearby folks say? Over the ear ones are my favorites as they cut out the ambient noise. Ones with noise cancellation have never sounded as good to me. In ear are fine for activity and on planes. If you go to over the ear ones, weight, and how well they fit is really important. I use some over the ear by Audio-Technica and in ear by Sennheiser. Blue tooth is fine, if you remember to charge them. I use wired ones now as I always ran the others down. In any case price does have an effect. If what you get are cheap, then you will become unhappy with them. Equally paying a huge amount will not likely be much better than many mid range ones. I figure the sweet spot is between \$100 and \$200. Try before you buy or at least have return rights.

That actually might be more practical than ones made for mobility. If you work from home, noise cancellation is a must.

And like you said, you get what you pay for.

It's better to get earbuds if you find yourself moving a lot. It has a noise-canceling feature that most headsets have. Since it's small and chargeable, you can also use it outside during a walk without feeling inconvenience.

You can use the situation to your advantage by buying on-ear headphones since you won't have to worry about fitting them in a bag. It can also give a better working atmosphere compared to earphones and earbuds because the equipment's features will bring you more focus.

I agree with this based on my experience. With earphones and earbuds, I get easily distracted because it makes me feel too comfortable. Maybe it's the noise-canceling feature, but the headphones' design of being over the head also helped maintain my focus.
