Hi Wayne,
Very excited about Pi4, could you send me the plans? :)

Hello there;

I would like to build the Pi4 speakers, could a JBL 2035HPL sound good in these cabinets or should I use 2226?
Please send me the build-plans for the Pi 4 cabinets.

Thanks;
Jorre

You've got mail!

This loudspeaker needs the JBL 2226H. Some people consider the 2035 to be an economy version of the 2226 - and it is that in some sense - but it doesn't provide the same response curve and so cannot be used as a substitute driver in the four Pi loudspeaker.

Hello Wayne,

Please send me the plans for the 4 Pi. Thank you very much!

I have been slowly acquiring parts here and there. I have the JBL 2226H now and need to save for the B&C DE250. In the interim (maybe) I have a pair of PRV D290py. Would that be a reasonable substitute as I fund raise?

With much appreciation!

Steve

You've got mail!

I've never tried that compression driver, but if its specs are right, it should be a drop-in replacement for the DE250, no crossover changes needed.

Thank you Wayne, that's the best mail I've received in a long time! It answers a lot of questions that have been floating around in my brain...and yet so many remain :p

Regarding the PRV Audio D290 Pv, it has an advertised sensitivity of 109 dB, which is really close to B&C DE 250's sensitivity of 108.5. At least in th ball park, eh?

I'm excited for this project. Thank you again, Wayne, for your generosity!

Regards,

Steve

Hello,
Can I please get plans for some 4 Pi speakers.
I have been searching for my next build, Was thinking of building my own design and when doing

research on everything I would need to do, designing the crossovers is where I was lacking in knowledge, it soon became apparent that there is a lot involved. Picking out components, speakers, horns and designing a crossover, measuring, tweaking listening, and possibly not having a set of speakers that sounded worth a darn in the end. I came across your 4 Pi Design. WOW you know your stuff. Started digging deeper and your 4 Pi speakers are highly regarded. I also noticed you sell kits and complete speakers. Do you take donations, I believe this is super nice to offer plans that you worked so hard on. I feel I should offer you something in return. My Brother has a set of 1990 vintage VMPS Super Towers and I love how they sound. Those led me down the rabbit hole to build DIY to try and find something that sounded that good. It seems your 4 Pi speakers have what I was looking for. I currently have 2 Dayton 15 RSS390HO slot ported subs, a set of Zaph waveguide TMM, and for rear speakers a set of Klipsh KG4. I want more.

HI Wayne,

I'd also like the 4 Pi plans.

Thanks,

Alan
