Hi All,

I'm building a pair of 4 Pi speakers and have a few quick questions. I intend to use the DE-250-8 and the Omega Pro-15A.

- Should both drivers be the 8 ohm versions?
- The Omega driver ends with "A" and that differs from what I have seen. Is that the correct driver?
- And my last question is about comparing the 15" drivers. Is there a significant difference between the Eminence and the JBL?

Sorry if this has already been answered.

Thank you!

JBL 2226H.

As for the qualitative differences between drivers and other options, please see the following links from the Pi Speakers FAQ:
Info to compare Pi models
Options in a nutshell
Upgrades
Electro-mechanical properties and diaphragm motion
Magnet structures
