seeing how I am a neophyte... I would ask of those who know more than me.
I have a listening room that measures 10x14 (was an office) it is used for movies once in a blue moon... But mostly for music. What would be your recommendations on speakers? with the understanding that I like Rush at not quite ear bleeding levels...
I am currently using a pioneer elite vsx94thx amp to drive the curent crap (polk) do I need to get exotic tube amps?? I am not against it but my wife is... sooo

I always recommend constant directivity cornerhorns for rooms that can support them, and our DI-matched two ways with flanking subs for rooms that can't.

Rooms that work well with our cornerhorns have two corners with unobstructed walls extending from each side of both corners and allow the listeners to sit behind the place where the axes cross.

Thank you Wayne, so since I have blank walls for 10 feet each way, sixes it is!

Once again, beginner questions, does the sixes kit make 1 speaker or 2? :d

Since I am upgrading the woofer to the B&C, and the compression driver and the resistors and the inductors... How much extra value sound wise do the Auricaps make vs the Jantzen Z caps? And the flat pack for the mid horn sounds like a no brainer.

Kits include parts to build one loudspeaker. They include the speaker drivers, the connector

incorporate a compression tweeter and crossover network, kits also include the crossover, Zobel woofer damper, and all cable assemblies are completed and ready to install. Every kit containing a compression driver also includes the horn flare and the bolts to mount the driver to the horn.

As for the upgrade questions, please see the Pi Speakers FAQ, specifically the section called "Models, Upgrades and Driver Characteristics." It has a couple links about options and upgrades that will probably help you decide what you want.
