I have a question regarding the 0.5mH coil in the 2PI crossover.

Can I also use a 0.47mH coil-which I have on hand?

Or do I have to buy a 0.56mH and unwind it till 0.5mH?

In Germany a 0.5mH coil is not a "normal" value...

Use the 0.47mH coil. It is just fine.

Thank you very much Wayne!

Can you please mail me the 2Pi Studio and Tower plans?

You've got mail!

If you have the room - especially if these speakers will be used as mains - choose the towers.

They dig much deeper into the bass than the bookshelf model. The bookshelf model is excellent for surrounds, and its size makes it also attractive for very small rooms, apartments and flats. But most people prefer the towers for mains.

Thank you very much for the plans.

All the best!

Hello Wayne,

i can only get the new DX25TG59 model in Germany and it seems that it is 2db "hotter" than the old model.

How can i bring it 2db down?

Best wishes

Frank

The replacement part is very similar, so no changes are needed.
