I tipped my turntable up on its side and the metal disc came off along with the belt. The turntable is an SL-B1 and I can't for the life of me figure out how to reattach the belt. Could anyone help, thanks.

Lift the rubber mat off the platter and you can maneuver the belt into place through the access holes in the platter. Just rotate the platter and thread the belt into position.

I figured it out it yesterday, I had to put the belt all the way around the platter and then to the motor. Thanks for the help though.
