I was wondering if someone had

3 or 4 of 39 ohm metal film 1/2 watt resistors 1%

3 or 4 of 47, ditto

3 or 4 of 51, ditto

3 or 4 of 523 ohm, ditto

hanging around they do not need? I cannot find a variety pack, even on Ebay.

Cheers

pos

Hi Pos, I can assist with the 39, 47 and 51. My LCR says the first two sizes are really close the 51s measure closer to 50.2 ohms though. They are supposed to be 1/2 watt size but look small. Then again new resistors tend to be smaller anyhow. The 523 you will have to make up with some combination. I'll see if I can pair some up for you (I'll get back later as the program is in a VM in my PC) The others are yours no charge, just let me know where to send them. PM me with the address.

Hi Pos, parallel 1K and 1.1K and it gives you 523.8 I have both in carbon film but not metal.

Let me know

PM sent Bruce.

Thanks.

Thank you Bruce for sending the values I needed. It is with much appreciation.

cheers
