I'm looking for the screws that will fit a JBL 2226 woofer. Bought a big pack of 10-32 machine screws that have the correct threads but the head is too big to fit into the speaker frame.

Looked online. Seems the JBL uses something called a Fillister head screw. Please let me know if that isn't correct.

You can buy them in massive quantities that run $60 or $800 dollars or you can buy used ones on Ebay for $4 or $5 each.

Anyone know of a source for a small quantity of new ones?

Many thanks,

Barry

I use button head screws. Another option is Allen head screws, but I think button head screws are more attractive.

Excellent. Button head screws are ordered ...

Many thanks!

That's extra stress when he can just order new screws that can get the job done. Don't you think so?
