Since I still have two Eminence H290s, two DE250s, and two 2226hs, I'd like to build the old version of the 4pi crossover. My old crossover plan shows a 20µF capacitor for C4 on the 2226h—the new plan shows a 10µF capacitor. Which value should I use?

Use a 10uF capacitor in position C4.
