Hey guys another question on my second-hand Technics SL-220..I got the pre-amp and now it works great but I'm having trouble when adjusting the rpms.. 33 rpms runs fine but when I adjust it to 45 it won't play. If i move the slider just right before it 'clicks' into '45rpm' it'll run but I can tell that it's slightly off-speed -- any suggestions?? Or am I just going to listen to 33rpms??Thanks in advance,Y. Kang

Sounds like it might be time to take it to the shop.

Thanks for all the help Wayne -- it turned out that the pitch adjusters are still functioning so I've just calibrated it by sound
