Hi, Can anyone please tell me the weight and anti-skating settings that I should be using. Have been experimenting for hours with no acceptable sound quality, would really appreciate the help.Nick

Tracking weight and anti-skate are set to your cartridge/stylus NOT the turntable. Use the cartridge manufacturer's recommendation. I'm guessing it should probably be about 2g or 2.5g.

Hello,I don't agree with real_one. The anti-skating and the weight is 1,75g. For most informations, you can see my answer in the next message about the LA-55Seb.
