I recently received some dj equipment for my birthday, but i'm a beginner to everything and don't know how to set it up. Can someone give me some pointers, please? ti would be much appreciated! equipment list -technics turntables [2]denon dn x100 mixerpyle pt1600 amp pyle pphp 1290 loudspeakeri'm very confused with the connection part between mixer/amp/loudspeaker. thanks for your help!

This forum isn't really for DJ tables. It's a hifi forum.That said, you basically just hook your table into a preamp, and that to a power amp. In your case, the preamp is a mixer. Understand that the phono cartridge output is lower than preamp level, so if your mixer doesn't have a phono input, you'll need a phono stage.
