You mean an Otari MX-5050, I assume. That's excellent! Those are good looking units, and the price is right. How does it sound?

Let us know how you like it when you are able to listen to it. I'm curious.I have a Pioneer RT-909, which I bought new in the early 1980's and have had ever since. I always liked it, but without Dolby, you can hear a touch of tape hiss. I have always thought about adding an external Dolby encoder/decoder, but never did. It sounds excellent, and only at the dead quiet passages can you hear tape hiss, and only a slight touch.

I got a bit of hiss on one tape, but I can't find a quiet spot on the other two tapesto really tell. I suspect it more a case of the tape rather than the machine.
