I've had my iPod now for a month and it's working pretty well. However, one setting has me stumped. I would go into Setting / Language and select French. But when I go back to my songs, they're still in English. Is there something I'm not doing right?

I'll bet the config settings only affect program menu items and don't translate song names.

I wasn't even thinking about the song names.How do I set it so that I can listen to the songs in French?
