Hil have a 100RMS (stereo), 80RMS (5.1 channel) amplifier. I am looking at two different set of speakers:1. 80 RMS/max 120 x 2 (Main), 35/60 RMS (Centre) and 30/60 RMS x 2 (Rear) at 4ohmsOR2. 100rms/max 150 x 2 (Main), 40/80 RMS (Centre) and 35/80 RMS x 2 (Rear) at 8ohms(this second specification is quoted as the above and then in other places as 150RMS each speaker, which I doubt.Which do you think I should go for?Thanks in anticipation.Andrew

What are the rest of the specs? Honestly, if you use just those numbers, you'll be making a pretty ill-informed decision. See if you can post some more information, and I'll bet you'll get some good advice here.

the speakers' "amount of watts" mean nothing in particular.i almost hate to say it, but: bigger is better; especially the hi-effeciency types.i'd urge you to learn more in general, about speakers.
