Subject: Need advice on cabinet choice for JBL E120

Im new here.I recently mounted a beefy speaker, JBL e120 in a fairly small cabinet(12"x17"x12") with no port and a closed back (sealed). Im currently using it with my electric guitar driving about 20 watts.Im wondering if this was the wrong choice of cabinet for such a speaker.I dont want to crank the power into it (or play a bass guitar) until I get some advice. Will I harm the speacker in this cabinet?If so, what would be a good choice for a cabinet?Thanks, Rick

That's just fine, now crank it up to 100 watts and enjoy.

The link I've attached shows optimal recommended inside dimensions and port size for a bunch of JBL drivers including your E120. Following the recommended size and a port will probably just get more out of the driver.
