The speakers worked fine this morning. Got home from work, fired up the computer and my right speaker has no power at all. Left speaker turns on no prob, blue on light etc. I've tried changing the power cable, outlets, everything. Is this thing fried?I have them plugged into my toneport UX2 and also using Guitar Rig 2.

Sounds like the power supply may have popped.

Very good! That's the easiest PS fix there is! Hopefully, the fuse won't blow again.
