My Tandberg tuner station selector cord broke. Is there a place that services Tandberg or can I buy the replacement parts somewhere and do it myself?

Most repair shops can replace that sort of thing. It's usually just a cord with a tension spring. The hardest part is winding it through the dial and pulleys.

Do you know anyplace that repairs Tandberg tuners? I am having trouble locating a facility.
Thanks

Not specifically, but if the only thing wrong is the tuner dial cord, then I think any competent repair shop should be able to fix it.

Do you have any idea what this tuner is worth or where I can look to find it's value? I think I am

going to sell it as the two estimates I received so far start with around \$400 and probably closer to \$800 which includes changing capacitors and transistors.
