Hi! ^nice set of labhorns! i want my horn to look like that.Greetings from New Zealand!Progression is being made.Things have shaped up for the better.1) NZ dollar is strong (but shipping costs are still bastardly expensive)eg=100\$(us dollar) for 3month shipping!2) i inherited a small hatchback capable of transporting a basshorn3) the lab12 is 460\$ (NZ dollars)to my house,so il get it no matter what-its alot considering its 150\$ US at partsexpress.com !The shiva performs the same(small signal wise anyway)I really do trust the lab12 more,just look at its quality.

Your horn looks like it will pack a whallop in a small space! I'm sure it's designed for eighth space, so it should be installed within a foot of the corner or so. Your horn uses a single Shiva driver, doesn't it? I think your design is quite attractive - 35Hz response from an 11ft3 basshorn. That's really great, both because of its size and overall cost. Seems like it would be a great speaker for home hi-fi!

It can use a shiva or lab12 whichever i decide.its not too bad,unfortunately i had to sacrifice the real 30hz,chopping it 47cm too short.no matter,it HAD to fit in the car,or else its no use to get it home...:-)

Good to be able to second-source a part. That way you can be more certain that parts will always be available, and sometimes negotiate better prices too.It's really radical to put a basshorn in a car.
