Finally got my new _aX_ and eagerly perused the Tuba 24 subwoofer horn just as I do all of your projects. It's still _pretty big_ for HT is my take on it. So I'm looking forward to the Tuba 18 article to come.

Yes, it's a bit large for HT, though anyone with a pair of A7s wouldn't think so. The 18 is definetely better in that regard, though corner placement is a must. Tuba 18 is still undergoing testing with various drivers, so probably 6 months before it goes to press.
