What is going on with 'unity horns'? They caught my attention awhile ago when I lacked time to investigate them and now that I have time they seem to have dissappeared? What is the story? Please soembody fill me in. I'd really like to experiment with them in the next few months.

They arnt being sold anymore to DIYers but you can still make one for yourself if you can get it right. Or you might check out Yorkvilles Unity Horn (uses three midrange drivers and compression driver on a round conical horn), based on Tom Danleys design.

Nick McKinney of Lamda Acoustics was making kits for DIYer's. Now he is out of business / making woofers on the side - I'm not entirely sure. Anyway, he is not selling unity kits as Adrian noted. You can still get unity horns from the source - Servodrive / Sound Physics Labs. They've also licensed the idea to Yorkville, although I think that entire design was done by Todd, one of the designers there and licensed afterwards.John

Our Unity cabinets (U15 and U215) are doing better than we could have hoped for. The U15 has been out for around 5 months now and we still can't keep stock in the warehouse.There is more info on our web site.www.Yorkville.comCheersTodd Michael

You probably didn't know, but please refrain from making comments about a specific product your company sells in reply to a general inquiry in an open forum. If asked about the Yorkville U15 or U215, then by all means, reply with details. But if not, please don't.Several people have commented about your products already, so it is a mute point really. We just want to make sure you've seen the rules. Please don't be offended and thanks for your understanding.
