for home theater. Would it improve efficiency or low end extension?

1-I wouldn't use an autotuba for HTHT is demanding and requires very low frequency output
2-Why not use a larger horn that's more suited to the HT role
3-A mouth extension will improve the output particularly in a corner-even one of conical expansion
Post in Bill Fitz's forum, you'll get an answer
Cheers! Mike.e
horn info

It's true that you don't have to use an AutoTuba for HT; for me the smaller Tuba 18 is quite sufficient, though it doesn't go quite as low, only 25Hz as opposed to 20Hz.
