A question regarding the calculation of tube length. I used WinISD to calculate the length of the port tube for some speaker cabinets I am refitting. Depending on how the information is entered, I arrive at two port tube lengths within a 1/4" of each other. Something like 44 and 51 cm - should I split the difference. Stats: 2 ports, 3 7/8" diameter Volume: aprox. 7.5' (width 20.5", height 47", length 14.5") Delta Pro - 15" drivers 3/4 Birch Cabinets Tweeter: PSD2002 Thanks in advance Jim

That difference is very small, way too small to have an effect.
