Hi all,The corner horn thing might not make it past the wife so I'm thinking up other ideas for a compact system. The good old Delta 12LF in a closed box for 60hz crossed to a Parts Express Titanic 12 that I already have seems viable. Has anyone worked out a crossover at or around 1Khz for the Delta 12?Wishing everyone a save and joyful holiday, Scott

I have a 1kHz crossover you can use. It's designed for use with a 1" compression driver on a 6" long horn. Send me your E-Mail address if you're interested.
