There is almost no musical information at 18 khz, especially since most adults can't hear over 15 khz anyway. And that is a pretty good range for a driver/horn combo.

Yeah, I guess you're right, I was just kind of surprised it rolled off like that. I do think that upper stuff lends a sense of air and openness, but no real information there.

I'll check my inventory to see if I have any left, If not check with Colin Hester here on the board, I sold a pair to him a year ago and I think he switched to something else. There's somebody else on the board here that has quite the Altec collection, but I forgot who. But I'll let you know next Tuesday if I have any left. Bill W.

No luck on the 811b horns, I checked and I have only 1 but it's damaged. You might keep an eye on ebay they pop up there occasionally.Bill W.

Since I first suggested the Altec 811b horns, I have purchased two pair on ebay without difficulty. One pair was a VERY new looking Heathkit 811b pair.I don't see any difficulty in buying these.

Subject: They sound OK, big azz image throw, but polarity ?'s (please help)  
Posted by [LineArrayNut](#) on Tue, 30 Jan 2007 13:13:50 GMT  
[View Forum Message](#) <> [Reply to Message](#)

---

The shipper screwed up and shipped them on a small pallet and splintered the bottoms, oh well. They work good, no low bass or upper highs, but are ok. Question is, the horns have no obvious polarity markings. The terminals are on top. Looking from the back at the driver, which side is positive and negative? thanks for the replies!

Subject: Look for a notch in response  
Posted by [Wayne Parham](#) on Tue, 30 Jan 2007 15:23:57 GMT

---

Do you have access to any measurement equipment where you can look for a notch in response from out-of-phase signals? If not, maybe download Speaker Workshop. If the tweeter is miswired, you'll see a notch in response somewhere within an octave of the crossover frequency.

Subject: Terminals are marked "1" and "2"  
Posted by [spkrman57](#) on Tue, 30 Jan 2007 22:47:58 GMT  
[View Forum Message](#) <> [Reply to Message](#)

---

Altec used this to determine polarity. I believe (from memory only) that terminal "2" is positive and "1" is negative for a positive waveform exiting the horn mouth. Regards, Ron

I don't know what your application is, but here's mine, a P-Audio 4525 400Hz (2" throat) horn with a BMS 4590 2" driver (coax) in it...DM
