Hi all,I've never posted here before but I need a little help. I have a pair of FE206Es in BR cabinets that I built about a year ago and I would like to design a baffle step correction circuit for them. I have downloaded the "Edge" program (thanks Mr. King!) but I'm having a little trouble understanding everything I'm looking at. Can someone hold my hand a while and walk me through this first design? Any help is appreciated.G

Gavin,The person who wrote the program frequents the DIY Audio forum in the speaker subforum.http://www.diyaudio.com/forums/forumdisplay.php?forumid=6I have asked him (Svante) questions in the past and found he is very helpful. I recommend that you address any specific questions in that forum, if you go directly to the source you will probably get the best answers.Martin
