I just ordered a pair, too. Now I'm Googling around trying to find out how they're gonna sound Is the Fostex "Recommended Back Loaded Horn Enclosure" the only cabinet worth considering?

Terry Cain is the only person I know of that has heard the drivers state-side. I posted a "pre-order" message at the Diyaudio single driver forum where he replied about the sound.The "backhorn" seems to be THE cabinet if you want to get the most bandwidth without sacrificing eff..  
Note that Madisound has updated their pdf drawings.
