I'm debating wheather to go 6.5 or 8. I'm interested in a smallapprox. .75 cu. ft. enclosure.First and foremost is sound quality. I'm not sure what are the optimal dimensions or interior volume for these two drivers and is it mainly the volume or do the demensions of the volume play a big role? How about size and length of front port? Thanks! Pete

I'd go with the 6.5: it has a flatter response. I'd also use a sub. IF you are going pure single driver, then a 206 with a contouring circuit will probbaly be better. My 2 cents.thanks-akhilesh
