I got three pair of P-610MB from Koji when they were closing out. Rolled over on one in a drunken stupor, so I now have 2½ pairs. Idiot. They were the original designated driver for my SuperPipe:Ta Dah!As you will see in the page, I do not consider this a true fullrange, though some important sources will disagree. In my Very Small opinion, they are the absolutely best widerange I have heard. From 80Hz - 12KHz, they have the best sound I have ever heard in a speaker. You hear difficult to reproduce (steelstring or classical guitar, grand piano, tenor sax, human voice) instruments you are familiar with through these things, you will catch your breath.

It's so real. The high color of timbre throughout the range surpasses anything I have heard.I'm trying to decide what to do with these. My current thought is to biamp; use some ANIMAL 18" woofer on one amp for the bottom, the Diatone fullrange with a supertweet on a ~1µF cap on a nice little tube amp for the rest of the range. This might be the Sound We Strive For. You want to know what I think of these, as a potential resource? I have two pairs. I will sell you one of these pairs (leaving me the odd one as a spare) for \$10,000.Make that \$20,000.Poinz

I can write you a check. On the sawtooth national bank. You won't need credentials, they know me there.I am intrigued; so when you were drunk you thought it would be a good idea to take out your Diatone's to look at them and fell asleep?
