Can anyone help with this situation:I have a nutone home intercom system and one of the speakers voice coil has gone out.I can't find a replacement speaker, and they want too much \$\$ for the whole unit that contains the speaker.I can't find a new speaker, it's a little 3 1/2", 16 ohm speaker. Noone carries 16 ohm.. Is there somewhere I can order one of these? Can I order a 4 ohm and add a resister in line to one of the connections to make it 16 ohm resistance??More of these units are probably gonna go out over the years, hopefully I can find an affordable replacement speaker.Thanks for any help!

series resistor, because I don't think the additional current will hurt the amp. If it has a volume control, then just don't turn it all the way up and you'll be fine.
