Just received a pair of dca4 speakers that were damaged in transit. I hope one of you will be aable to help me. The surround on one side was pushed in and the driver cone is slightly creased. I was able to stretch the surround out onto the frame but there is still a small indentation in the surround. The crease is not real deep but you can see it if you look for it.. I need to glue the surround back. Any suggestions on what kind of glue and how to best do it? Also any idea if the crease will affect sound. Any help greatly appreciated.

Sory to hear they were damaged. Here is a possible solution.
Speaker Glue
