By now, a number of members and others must have received their 5.5 and 4 inch DCA drivers and at least some of them must be in use by now. However there is no feedback. Could members share their experiences? Newbies like me would appreciate it MDJ

Hi MDJ, I've been using the DCA5s for a few months now. They are being driven by a Vista Audio i84 tube amp. I really like the sound. Lots of bass too.
