I have a pair of Pioneer A11EC80-02F 4.5" laying around. Do you have any recommendations for these? I would like to build a single driver set-up.

I'd put those in small boxes about 650 cubic inches tuned to 75Hz. Outside dimensions of your box would be 13-7/8" x 6-5/8" x 10". Use 1/2" wood and drill a 1" diameter hole for a port. The wood thickness is important here, because it sets port length. Use a little stuffing to damp internal reflections but don't cover the port. Line one side, the bottom and back.
