Subject: Experiences with Jordan JX53 or Bandor 50 mm in line array?

Has anyone any experience with either of these drivers. I thought possibly using them in a TL design with out the need for a tweeter or crossover could be good. Also, the Bandor drivers are available in a 16 ohm version. Any thoughts or direction to existing designs using either of the drivers would be helpful.ThanksNorris Wilsonhttp://www.ejjordan.co.uk/drive_frameset2.htmhttp://www.bandor.com/products_frame.htm

Norris, I haven't used Jordan drivers for many years. However, I have designed some mini-array speakers using the Bandor 50mm units and can thoroughly recommend them.I have designed a TL version (see link below) but my latest design uses the 50mms in a sealed enclosure and accompanies them with separate bass speakers.Bandor do a 16 ohm version, as well as 8 ohm and 4 ohms. I have used the 8 ohms in the past but prefer the 4 ohms these days as the moving mass is lower and high frequencies better.Steve Margolis
TL Line Array using Bandor drivers.
