why is it that I don't see the use of foam to reduce diffraction on open baffles or line arrays?What effect would say a layer of sonex have on an open baffle.would it be better just on the edges?any rear damping?

I think absorbent foam at any terminus must be a good thing.

http://www.doddsy.net/steve6_012.htm I think this guy describes a covering on his OB baffle.I was very attracted to the design when I saw it.
