I need someone to modify a couple of speakers I have with faraday ringsthis is more or less something I'm looking to do in the next couple of months not necessarily right nowI need a person... fairly easy to talk specifics with (nobody hard to reach and such) that can add compensating coils to 4 speakers...TC sounds is the only place I know of which does this kind of work... but now that the forum dude is not working there I can't seem to get ahold of anyoneanybody know a person or know of someone with enough knowledge to swap the coil?

Are you going to remove the magnet and modify it, adding a shorting ring? Or are you planning to work on the voice coil?If the former, you need a machine shop. If the latter, a place that does recones can do the work for you.

Pretty much any good speaker repair and recone shop should be able to do the work for you. I've had good luck with David Miller at Speakerworks, (918) 664-6299. He does a great job with

factory recone kits, but isn't limited to that. If there is no recone kit available or you want to do something special, he is pretty good at making sure it's done right, keeping the coil in the gap and making sure suspension travel is adequate, etc. So I think David would do a good job for you, but there are plenty of other capable repair shops too.
