I just noticed this new design for a mini array of 4 FF85K drivers used open baffle with a dual woofer BR box on the bottom. Whats the sound quality likely to be. Will the combing with 3" drivers be acceptable? If not, what are they thinking? taylor
Fostex Tallboy

>Will the combing with 3" drivers be acceptable? I made a stack with the nsb drivers. 4/ side. Sounded good. I think that if the differences in the distance from each of the drivers to the listeners ear is small the phase cancelation is small. And the combing is small. I did not hear much combing. I have ordered the fostex drivers for the top half (before I saw the post). I am not sure what I will do with the low fq section yet. I may also roll of the top at 5k or so and add a tweeter. They are very good sounding drivers.----- Linc
