Hello,I've bought 40 of the cheap drivers and I want to build a 16 ohm version of the TLAH. I need some help. What are some possible ways I could wire these drivers? Another question concerns the enclosure dimensions. The top of the baffle shows 17"s tapering down to 12"s with overall length 38"s If I were to use 16-20 drivers instead of 8 as in the original version, how would the dimensions change for this baffle and the other sides? Any help would be appreciated.

ThanksRegards,David

I'd answer you here but that would leave the rest of the guys at the Bill Fitzmaurice forum out of the loop. Suggest you ask over there.
