this is a pic of what I want to do... that's a Eminence horn in the middlehttp://feandil1.tripod.com/feandil/index.album?i=0&s=1the 12" in the bottom is actually now a bandpassed 15... only playing to 150 or so...any concerns before I get testing on the bandpass (don't know the EXACT way I want it)???

I wouldn't be placing midbass elements side by side, that's a certain recipe for comb filtering. I also prefer to use a line of tweeters rather than a single element, so that the tweeters and midbasses share the same radiation characteristics.
