Subject: Low frequency Xmax Posted by Zene Gillette on Sun, 22 Jan 2006 09:24:20 GMT View Forum Message <> Reply to Message

Hi .. While modeling small speaker OB arrays I noticed Xmax severely limits listening levels as slope is not very steep. Even increasing he driver Q does not help. Do all such speakers need high pass filters?Or, is -20dB down at say 30hz sufficient to protect driver. Zene
